

'Sandhan' – e-learning platform

'Sandhan' is an initiative of the Dept. of Higher Education, Govt of Gujarat. The ambitious project takes high quality education beyond geographical boundaries to the remotest of villages in the state through the use of Satellite Interactive Terminals and ArguSoft's Conferencing solution – **Communicate@Work**.

High quality lectures and specialized knowledge sessions that has been the privilege of students studying in big cities are now available to every needy student in the state. Expert lectures are delivered by Subject matter experts (SMEs) from a central studio is transmitted to over 900 colleges all over the State of Gujarat via SIT (Satellite Interactive Terminal) communication channel. Students at the connected colleges can view the lectures on the TV sets no matter where there collage may be located. This interactivity is a big step in bridging the gap between the mainstream collages and other remote educational institutions. The student asking questions from the remote location is also shown to the rest of the collages and this brings about a 'connectedness' with the whole group.

Current setup.
